SICK INNOVATION CENTER MOBILISIS - Croatia

INNOVATION CENTER MOBILISIS

We focus on advancing wireless sensor technologies, digital automation, and disruptive innovations such as AI. We build strong partnerships with regional software companies, support last-mile software customizations, and drive digital business models. We emphasize collaboration with universities to position SICK as a top career choice and transfer knowledge, while strengthening ties with local suppliers to optimize production. With a strong commitment to sustainability, we foster an agile environment ready to adapt to technological and market changes.

Driving innovation in sensors, gateways, software and digital automation.

Wireless Sensors & Digitalization – Pioneering infrastructure-free sensor solutions and scalable digital business models.

Partnerships & Customization – Collaborating with regional partners and providing last-mile software consulting.

People & Talent – Building strong ties with universities to make SICK a top career destination.

Sustainability & Agility – Creating an adaptive, future-ready environment aligned with technological trends.

SICK: Powering the Future of Industry From Industry 4.0 to Industry 5.0

SICK is a leading sensor intelligence company that creates solutions for safe, efficient and sustainable industrial processes. Our sensors, software and services enable smart factories today and human-centered factories tomorrow.

SICK IN INDUSTRY

4.0

ENABLING SMART, CONNECTED AND EFFICIENT OPERATIONS

SICK solutions provide the data and connectivity that form the backbone of Industry 4.0.

SMART SENSING & DATA COLLECTION

SICK sensors capture accurate real-time data on position, distance, presence, vision, flow and more.

CONNECTIVITY & INTEGRATION

Seamless integration via IO-Link, Ethernet/IP, PROFINET and OPC UA for transparent communication from field to cloud.

DATA-DRIVEN DECISIONS

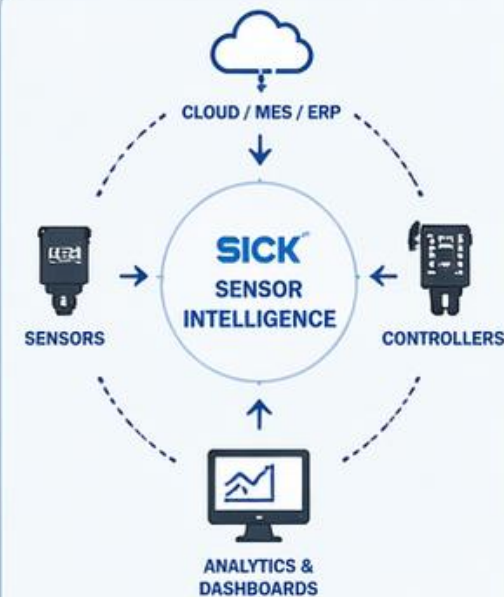

High-quality data enables monitoring, analytics and predictive maintenance to increase productivity and reduce downtime.

SAFETY & RELIABILITY

Safety solutions from SICK protect people and machines while ensuring high availability and compliance with global standards.

SICK SOLUTIONS IN ACTION (INDUSTRY 4.0)

AUTOMATION & POSITIONING

LiDAR, encoders and distance sensors ensure precise positioning, navigation and process control.

QUALITY INSPECTION

Vision sensors and 2D/3D cameras ensure quality, traceability and defect detection.

MACHINE SAFETY

Safety laser scanners, light curtains and safety controllers create safe working environments.

PROCESS AUTOMATION

Flow, level and gas sensors optimize processes and improve resource efficiency.

RESULT: Higher efficiency, flexibility and transparency across the value chain.

SICK IN INDUSTRY

5.0

EMPOWERING PEOPLE, SUSTAINABILITY AND RESILIENCE

SICK is at the heart of Industry 5.0—working alongside people to create a better, more sustainable future.

HUMAN-CENTERED TECHNOLOGY

SICK solutions enhance human capabilities and support safe collaboration between humans and machines.

SUSTAINABILITY

Our sensors help reduce energy consumption, minimize waste and enable circular and resource-efficient production.

ADAPTABILITY & RESILIENCE

Flexible, modular solutions and intelligent data help industries adapt quickly to change and build resilient operations.

VALUE BEYOND PRODUCTIVITY

SICK contributes to well-being, ergonomics and social value while delivering economic success.

SICK SOLUTIONS IN ACTION (INDUSTRY 5.0)

SAFE HUMAN-ROBOT COLLABORATION

SICK safety and vision solutions enable robots to work safely with people.

GREEN PRODUCTION

Monitoring energy, emissions and resource use to achieve sustainability goals.

FLEXIBLE & MODULAR AUTOMATION

Easy-to-integrate sensors that support reconfigurable and resilient production.

WELL-BEING & ERGONOMICS

Solutions that reduce physical strain and create safer, more comfortable workplaces.

RESULT: Sustainable, human-centric and resilient industries that create long-term value.

DIGITALIZATION DRIVES

A digital business leverages advanced technologies like IoT, AI, cloud computing, and big data to create interconnected, intelligent systems that enhance efficiency, automation, and innovation. It integrates digital tools into all operations, enabling real-time data analysis, smart decision-making, and seamless collaboration.

We need:

- A system that will offer a complete and secure information life cycle process
- Security of connected devices and data transfer
- A platform that will be able to work with analytical data solutions and AI models
- A client application with a strong and flexible server-side platform
- A standard protocols and procedures to protect the daily work of people and control business operability
